Welcome to our Spring issue of News Update. In this issue we have the latest news from SLRON library including information on our new e-library website: www.hselibrary.ie. We also have details of recent staff research including pictures from the Visiting Professor Event that took place earlier this month.

Changes are afoot... Lee is leaving the library to join the Activity Centre team. Lee has worked with me in the library since last August and has been a tremendous asset to the library. I wish him the very best of luck in his new, more artistic role within the hospital.

I’m heading off on maternity leave at the end March so sadly this means that library opening hours will be restricted from April 2nd. Staff will still have online access to journals, databases and other library services via www.hselibrary.ie but opening hours and book lending will be restricted. All library related queries should now be directed to regionallibrary@hse.ie or phone: 01-6352558.

Marie Carrigan, Librarian.

The Scandal by Fredrik Backman. 1st May 2018 at 5.15pm, 108 Bar, Rathgar.

For more information on our book club please click here
St. Luke’s Radiation Oncology Network is now part of the new National Health Library & Knowledge Service (formerly HSE Library). This means we now have access to all hse library resources currently available from the Dublin, Wicklow, Kildare region. Below we have answers to some of the queries you may have about our new e-library service. For regular updates on hselibrary you can follow us on twitter: @hselibrary

**How do I access library resources?**
Go to [http://www.hselibrary.ie/](http://www.hselibrary.ie/). From here you can search for journals, databases, ebooks etc. and avail of a number of library services. Please note that you will be required to log in via OpenAthens to access most of our resources.

**What is OpenAthens?**
OpenAthens allows you to access library resources from outside the St. Luke’s network. You also need an OpenAthens account to access some of our resources that are not IP authenticated from a hospital computer.

**How do I register for an Open Athens account?**
From the hselibrary homepage click on the ‘Set up an account’ link. From the ‘Select Your Library Service’ drop down menu select HSE (Dublin Wicklow Kildare). From the ‘Select a Hospital Location’ drop down menu select St. Luke’s Radiation Oncology Network. Fill out the form and click submit. You will then receive an email from OpenAthens with your username and a link to activate your account.

**What resources are available to me?**
To find out what resources you have access to go to [http://hselibrary.ie/](http://hselibrary.ie/) and click on the ‘Your Local Library’ tab. Select ‘St. Luke’s Radiation Oncology Network’ from the list of local libraries. From here you will see a full list of resources available to SLRON staff including links to popular resources such as Cinahl, UpToDate, Psycinfo, Clinical Key etc.
How do I search for journal titles?

- Go to [http://hselibrary.ie](http://hselibrary.ie)
- Click on 'Search E-Library'
- You will be prompted to enter your OpenAthens Username and Password.
- This brings you to our discovery tool which allows you to search for all hse library content
- Click on the Journals tab and enter the title of the journal you’re looking for e.g. Seminars in Radiation Oncology and hit the search button.

From the screenshot below you can see we have access to Seminars in Radiation Oncology from 2007 onwards via Clinical Key. Click on the hyperlink Clinical Key.
Why am I getting no results when I search for a journal title?
If we don’t have a subscription to a journal title it will not show up when you search for it on hselibrary. If you would like access to an article from a journal we don’t have subscribe to you can request it as an interlibrary loan.

How do I request an interlibrary loan (ILL)?
You can download our ILL form by going directly to SLRON's page on HSE Library: http://hselibrary.ie/st-lukes-radiation-oncology-network-library-dublin/. Click on the link ‘Order an article from St Luke’s Radiation Oncology Network’ and print out form. Fill in the relevant details and then email to regionallibrary@hse.ie. You will be notified once your article becomes available.

How do I request a literature search?
From the hselibrary homepage click on the ‘Submit a Research Request’ link. Fill in the online form https://hq-hse.interleaf.ie/portal/ and click submit. This request is then sent out to HSE Librarians. You will receive a phone call or an email from a librarian who has been assigned to your search request. The librarian will have a conversation with you about your search request and will then run a literature search based on the information you’ve supplied. A list of references and abstracts will be emailed to you. The librarian will also supply you with a search strategy document outlining keywords, MeSH headings, databases searched etc.

Help! I need training on how to use HSE Library?
For training on hselibrary please go to http://hselibrary.ie/help/help-support/
If you would like departmental training on this website or on a particular resource please contact regionallibrary@hse.ie
Visiting Professor: Brian O’Sullivan, Monday March 12th, 2018, Education Centre, St. Luke’s Hospital

From left to right: Prof John Armstrong, Chair, welcome address. Visiting Professor Brian O’Sullivan presents his talk on “De-intensification for HPV-related Oropharyngeal Cancer: The difficult journey back”

From left to right: Dr. Jill Nicholson, Dr. Orla Houlihan, Dr. Martin Higgins, Dr. Richard Moore.

From left to right: Prof Brian O’Sullivan, Dr. Martin Higgins and Prof John Armstrong.

Dr. Martin Higgins was awarded a prize for his presentation on nasopharyngeal carcinoma.
St Luke’s Radiation Oncology Network
Research Activities

We would like to document all research completed by SLRON staff including journal articles; books or contributions to books; oral/poster presentations at conferences; PhD/doctorate research etc. Please submit your latest research to library@slh.ie and we will include details in our next News Update.

Recent Staff Presentations

Katryn Carson. Information session on working with patients who have had Nuclear Medicine procedures. Videoconferencing Room. 22 Jan 2018.

The following presentations were delivered at the Visiting Professor event on the 12th March 2018.

Dr. Richard Moore. Neoadjuvant treatment with chemotherapy for synovial sarcoma of the right humerus.

Dr. Martin Higgins. Nasopharyngeal Carcinoma: a case and review.

Dr. Orla Houlihan. Head and Neck Carcinoma of unknown primary.

Dr. Jill Nicholson. Dendritic follicular cell sarcoma.

Finding the Evidence

Below is a snapshot of some of the recent literature searches carried out by the librarian. If you are interested in any of the topics listed we will send you a full list of citations.

If you have a clinical query or research question and would like a librarian to run a search on our databases and supply you with a search strategy please fill in the online ‘Submit a Search Request’ form available from www.hselibrary.ie.

- Lung treatment planning technique using flattening filter free beams.
- For people with cancer/who have had cancer, do social supports/psychological supports improve outcomes?
- In patients diagnosed with oesophageal and OGJ cancer, is there evidence that multidisciplinary team care improves quality of care?
- In patients diagnosed with rectal cancer, is CT TAP (X ray computed tomography thorax, abdomen pelvis) superior to other imaging modalities (chest radiography, ultrasound, MRI PET-CT) for diagnosing distant metastases?
- What is the role of radiotherapy in the adjuvant treatment of maxillary sinus carcinoma and the clinically node negative (N0) neck?’
- Prostate cancer and survivorship
- In patients with borderline resectable pancreatic cancer, does neoadjuvant radiotherapy compared with no radiotherapy improve resection rates; negative margins; disease free survival and overall survival?
- For people with squamous cell carcinoma of the oral/anterior tongue (pNO/pN1) does postoperative RT unilateral/bilateral compared to no RT result in better local/regional control and improved overall survival?
